PROFESSIONAL SUMMARY

Software Engineer with experience in backend development, full-stack application development, REST API design, and scalable software systems. Skilled in Rust, Python, FastAPI, Django, JavaScript, React.js, and database-driven application development. Experienced in building healthcare, fintech, and SaaS-based platforms, including patient management portals, internal business portals, microservices, and production-ready APIs. Strong foundation in data structures, system design, async programming, concurrency, authentication, and maintainable software architecture.

TECHNICAL SKILLS

Languages: Rust, Python, JavaScript

Backend: FastAPI, Django, Django REST Framework, Node.js, Express.js

Frontend: React.js, Next.js, HTML5, CSS3

Databases: MySQL, MongoDB

APIs & Authentication: REST APIs, API Integration, JWT Authentication, AJAX

Tools: Git, GitHub, Postman, VS Code

WORK EXPERIENCE

Software Engineer | Salubrious Technologies, Lucknow

Jan 2026 - Present

- Developed and maintained the Patient Relief Portal to manage patient records and patient relief percentage data.
- Built backend services in Rust using async programming and concurrency concepts for reliable, high-performance workflows.
- Designed RESTful APIs for patient management, relief percentage tracking, and structured healthcare data handling.
- Improved backend architecture and service logic for maintainability, reliability, debugging, and production readiness.

Software Engineer | WealthFino Capital, Bangalore

May 2025 - Dec 2025

- Developed an internal fintech business portal using FastAPI to support operations, workflows, and backend process management.
- Designed and integrated RESTful APIs for secure communication between backend services and frontend interfaces.
- Built full-stack features using FastAPI, Django, and React.js with database-driven business logic and API integrations.

Software Engineering Intern | Analyze Infotech, Lucknow

Dec 2024 - May 2025

- Assisted in developing web application features using Python, Django, and related backend technologies.
- Supported API development, debugging, and testing for application modules and backend workflows.

PROJECTS

AI-Powered Real-Time Quiz Game | Personal Project | Category: AI / EdTech / Agents

- Defined product and architecture requirements for an AI-powered quiz platform that generates MCQ and True/False quizzes from selected topics or uploaded study material, with solo and live individual multiplayer modes.
- Designed a conceptual three-agent workflow with a Content Analyzer, Question Generator, and Question Validator for scope extraction, question generation, and independent quality/correct-answer validation.
- Specified deterministic responsibilities for file-security validation, quiz/game state, answer evaluation, result review, and attempt persistence, including prompt-injection safeguards for uploaded documents.

EDUCATION

Bachelor of Computer Application

Oct 2022 - Jul 2025

IISE College

CERTIFICATIONS

Frontend Developer React Certificate - HackerRank

SQL Certificate - HackerRank

Python Certificate - HackerRank
